BandOps

Multi-Agent Command Rooms for Crisis Operations

STATUS: SYSTEM ONLINE

CRITICAL_ALERT

The **\$15,000/Minute** Problem

- > A grounded plane (AOG) costs airlines \$15,000 per minute.
- > The clock starts immediately.
- > Every second wasted on logistics is thousands of dollars burned.

FAILURE_MODES

The Problem: Siloed Crisis Ops

- | **Data Fragmentation:** Mechanics, Logistics, and Ops use different systems.
- | **Latency:** Communication relies on phone calls and emails.
- | **Compliance Risk:** FAA regulations are often manually checked.
- | **Cognitive Overload:** Humans panic under immense financial pressure.
- | **Zero Traceability:** Post-crisis audits are a nightmare.

BOTTLENECK_DETECTED

Current Reality: Trapped Dispatchers

The human dispatcher is the bottleneck, trapped between:

Maintenance APIs

Supply Chain Databases

Crew Scheduling Systems

Weather & Air Traffic Control

FAA Compliance Manuals

SOLUTION_INITIALIZED

Introducing BandOps

| A secure, cyber-physical Multi-Agent Command Center.

| Replaces siloed human panic with an orchestrated swarm of AI agents.

| Built for high-stakes, highly regulated enterprise environments.

| **Powered entirely by the Band API Mesh.**

ARCHITECTURE_RATIONALE

Why **Band**?

Without Band

Agents exist in isolation. Custom websockets and auth for 6 agents takes months of fragile engineering.

With Band API

A persistent, zero-trust mesh. Identity verification, cross-framework state sync, and immutable logging out of the box.

SIGNAL_FLOW

Architecture: 7-Stage Signal Flow

[01] Event Trigger (AOG Detected)

[02] Mechanic Diagnosis

[03] Supply Chain Sourcing

[04] Flight Ops Delay Calculation

[05] FAA Adversarial Audit

[06] Commander Synthesis

[07] Immutable Ledger Write

AGENT_ROSTER

Meet the Agents

MECHANIC

Diagnoses faults based on MEL.

SUPPLY CHAIN

Sources parts globally.

FLIGHT OPS

Calculates delay costs and swaps.

CREW SCHEDULER

Locates reserve crews.

COMMANDER

Synthesizes the debate.

FAA COMPLIANCE

Adversarial auditor with veto power.

LIVE_TRANSCRIPT

Agent Dynamics: The Band Room

[MECHANIC]: Fault confirmed. Need part #X789.

[LOGISTICS]: Found in Seattle. Shipping takes 4 hours.

[FLIGHT OPS]: 4 hours breaches the delay threshold.

[FAA COMPLIANCE]: WARNING – Proposed crew will violate max duty time.

Agents debate collaboratively, resolving conflicts in milliseconds.

SAFETY_PROTOCOLS

Human-In-The-Loop (HITL)

PILLAR 1: **AI Prepares**

The heavy lifting of data synthesis is automated in milliseconds.

PILLAR 2: **Humans Approve**

Critical operational decisions are never fully autonomous.

PILLAR 3: **Trust Compounds**

Human operators learn to trust the swarm's accuracy over time.

COMPLIANCE_LEDGER

Immutable Audit Trail

- | Every message, tool call, and decision is cryptographically signed.

- | Logged to a write-only database structure.

- | Provides flawless traceability for FAA regulators.

- | **Zero black boxes.**

COMPETITIVE_ANALYSIS

Differentiators

Most AI Projects

Toy chatbots, single framework,
zero compliance, total black box
operation.

BandOps

High stakes, cross-framework via
Band API, strict compliance,
completely auditable.

We built a true enterprise application, not a wrapper.

BandOps

The Future of Crisis Operations.
